EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Andrew Tiajolloff on 7/15/2009.

The application has been amended as follows:

The claims have been amended as follows:

- Claim 1. (CURRENTLY AMENDED) A method for producing a blank for a component of laser active quartz glass, said method comprising:
- a) providing a dispersion with a solids content of at least 40% by wt. which contains SiO₂ nanopowder and dopants, including a cation of one or more rare earth metals or transition metals in a liquid,
 - b) granulation by moving the dispersion with withdrawal of moisture until a doped SiO₂ granulate of spherical porous granulate grains having a moisture content of less than 35% by wt. and a density of at least 0.95 g/cm³ is formed,
 - c) drying and purifying the SiO₂ granulate by heating said SiO₂ granulate to a temperature of at least 1000°C so as to form doped porous SiO₂ granules having an OH content of less than 10 ppm, and

- d) sintering or melting the doped SiO_2 granules in a reducing atmosphere so as to form the blank of doped quartz glass, including wherein said sintering includes a gas pressure sintering, which comprises the following steps:
- aa) heating the SiO_2 granules to a melting temperature of at least 1600°C while applying and maintaining a negative pressure;
 - bb) holding the SiO_2 granules at the melting temperature at an overpressure ranging from 5 bar to 15 bar for a melting period of at least 30 min so as to form the quartz glass blank;
 - cc) cooling the quartz glass blank while maintaining said overpressure.

Claim 9. (CURRENTLY AMENDED) The method according to claim 1, wherein the porous SiO_2 granules obtained according to step c) have an OH content of less than one ~~wt~~ ppm.

Claim 16. (CURRENTLY AMENDED) A method of transmitting laser light, said method comprising:

~~providing an SiO_2 blank obtained according to a method as claimed in claim 1,~~

producing a blank for a component of laser active quartz glass, said producing comprising:

a) providing a dispersion with a solids content of at least 40% by wt. which contains SiO_2 nanopowder and dopants, including a cation of one or more rare earth metals or transition metals in a liquid,

b) granulation by moving the dispersion with withdrawal of moisture until a doped SiO_2 granulate of spherical porous granulate grains having a moisture content of less than 35% by wt. and a density of at least 0.95 g/cm^3 is formed,

c) drying and purifying the SiO_2 granulate by heating said SiO_2 granulate to a temperature of at least 1000°C so as to form doped porous SiO_2 granules having an OH content of less than 10 ppm, and

d) sintering or melting the doped SiO_2 granules in a reducing atmosphere so as to form the blank of doped quartz glass, wherein said sintering includes a gas pressure sintering, which comprises the following steps:

aa) heating the SiO_2 granules to a melting temperature of at least 1600°C while applying and maintaining a negative pressure;

bb) holding the SiO_2 granules at the melting temperature at an overpressure ranging from 5 bar to 15 bar for a melting period of at least 30 min so as to form the quartz glass blank;

cc) cooling the quartz glass blank while maintaining said overpressure;

and incorporating said SiO_2 blank into a core material for a fiber and transmitting said laser light through said fiber.

Claim 17. (CURRENTLY AMENDED) A method of transmitting laser light, said method comprising: ~~providing an SiO₂ blank obtained according to a method as claimed in claim 4,~~

producing a blank for a component of laser active quartz glass, said producing comprising:

a) providing a dispersion with a solids content of at least 40% by wt. which contains SiO₂ nanopowder and dopants, including a cation of one or more rare earth metals or transition metals in a liquid,

b) granulation by moving the dispersion with withdrawal of moisture until a doped SiO₂ granulate of spherical porous granulate grains having a moisture content of less than 35% by wt. and a density of at least 0.95 g/cm³ is formed,

c) drying and purifying the SiO₂ granulate by heating said SiO₂ granulate to a temperature of at least 1000°C so as to form doped porous SiO₂ granules having an OH content of less than 10 ppm, and

d) sintering or melting the doped SiO₂ granules in a reducing atmosphere so as to form the blank of doped quartz glass, wherein said sintering includes a gas pressure sintering, which comprises the following steps:

aa) heating the SiO₂ granules to a melting temperature of at least 1600°C while applying and maintaining a negative pressure;

- bb) holding the SiO₂ granules at the melting temperature at an overpressure ranging from 5 bar to 15 bar for a melting period of at least 30 min so as to form the quartz glass blank;**
- cc) cooling the quartz glass blank while maintaining said overpressure; and**

incorporating said SiO₂ blank into an optical filter; and transmitting said laser light through said optical filter.

Claim 18. (CURRENTLY AMENDED) A method of transmitting laser light, said method comprising: ~~providing an SiO₂ blank obtained according to a method as claimed in claim 1,~~

producing a blank for a component of laser active quartz glass, said producing comprising:

- a) providing a dispersion with a solids content of at least 40% by wt. which contains SiO₂ nanopowder and dopants, including a cation of one or more rare earth metals or transition metals in a liquid,**
- b) granulation by moving the dispersion with withdrawal of moisture until a doped SiO₂ granulate of spherical porous granulate grains having a moisture content of less than 35% by wt. and a density of at least 0.95 g/cm³ is formed.**

- c) drying and purifying the SiO₂ granulate by heating said SiO₂ granulate to a temperature of at least 1000°C so as to form doped porous SiO₂ granules having an OH content of less than 10 ppm, and
- d) sintering or melting the doped SiO₂ granules in a reducing atmosphere so as to form the blank of doped quartz glass, wherein said sintering includes a gas pressure sintering, which comprises the following steps:
- aa) heating the SiO₂ granules to a melting temperature of at least 1600°C while applying and maintaining a negative pressure;
- bb) holding the SiO₂ granules at the melting temperature at an overpressure ranging from 5 bar to 15 bar for a melting period of at least 30 min so as to form the quartz glass blank;
- cc) cooling the quartz glass blank while maintaining said overpressure; and

incorporating said SiO₂ blank into a cladding tube for a fiber; and transmitting said laser light through said fiber.

2. The following is an examiner's statement of reasons for allowance: The primary reason for allowance of claims 1-18 is that the method steps of independent claims 1, 16, 17, and 18 include a combination of limitations such as a ceramic dispersion providing a dispersion comprising a silica nanopowder doped with rare earth elements,

drying the dispersion to provide a silica granulate containing less than 10 ppm OH, heating the granules at 1600 degrees Celsius while applying a negative pressure and holding the granules at a melting temperature for at least 30 minutes at a pressure of 5 to 15 bar then cooling at this pressure. This combination of limitations would not have been obvious to one of ordinary skill in the art in view of the closest prior art on record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
